December 13th, 2005 – 5 p.m.

The vital role of Knowledge Management in the Oil & Gas Industry

Dr. Luigi Salvador

Luigi Salvador, Chairman of SPE Italian Section, will hold the lecture about "Knowledge Management" on December 13th, 2005.

Knowledge Management has been identified as one of the main areas for the growth and development of the Oil & Gas industry.

The process is "circular" and aims at facilitating the sharing of knowledge and consolidating the main business, pooling the experience gained from the pilot projects of the E&P and R&M Divisions and arriving up to the drawing up of common guidelines that define the organizational context (roles, processes, responsibilities) and technological infrastructures for creating an integrated system of Group knowledge management. It allows to improve performance and quality, to reduce business risks, and to cut on project cost and time.

Innovative thought and evolution of working processes need and thrive on "knowledge", inside and outside the company. The people, the knowledge workers and their capacity and will to exchange knowledge are the key of success.

STYPED thanks Eni Corporate University for its kind cooperation
